

Hose end valve

APPLICATION

AL 343 valve is installed on the unloading hose and is used for filling storage tanks on the auto-gas stations. It is equipped with a blocking device, which prevents from accidental valve opening. Usage of AL 343 valve minimizes amount of released gas while separating it from tank's filler valve (the shut off disc is located in the front section of the hose end valve, as close as possible to the filler valve of the tank)

SPECIFICATION

Inlet size: 1" NPT

Outlet size: 1 3/4" F ACME

Cat. No: 12.505

AL343

Squibb Taylor valves are very handy as their connecting section can be rotated 360°, unique shape of the handle simplifies the service. It is usually used with rotaseal swivel AL 109.
